Re: Severe Weather Safety

Dear MSYSA League Presidents and Delegates:

Attached, you will find a copy of US Soccer's Position Statement as it relates to severe weather. The attached position paper is fully endorsed and serves as MSYSA's policy with respect to lightening, wind storms, and other severe weather conditions.

It is important to note, from the information provided by Pullen Insurance Services, Inc., that all thunder storms produce lightening and are dangerous. If you hear thunder, you are in danger. The information that is attached states that anytime thunder is heard, a thunder storm is close enough to pose an immediate lightening threat to your location.

Per US Soccer's Position Statement, when you see lightening, count the time until you hear thunder. If this time is thirty (30) seconds or less, seek shelter. Wait thirty (30) minutes or more after hearing the last thunder before resuming activities.

It is strongly recommended, prior to practices that if thunderstorms are forecast, consider postponing activities early to avoid being caught in a dangerous situation.

Please carefully review the information attached. Should you have any questions please do not hesitate to contact us at the MSYSA State Office.

Sincerely,

Thomas K. Faro
MSYSA Executive Director

Re: Dealing with Severe Weather

Date: September 23, 2003 (REVISED OCTOBER 6, 2003)

This position paper provides basic guidelines for dealing with lightning, windstorms, and other severe weather conditions. The peak season for severe weather occurs in the United States between May and August, typically in the late afternoon and early evening.

1. Lightning

- a. Recognizing the threat
 - (1) Apply the 30-30 rule
When you see lightning, count the time until you hear thunder. If this time is 30 seconds or less, seek proper shelter. If you can't see the lightning, just hearing the thunder is a good back-up rule. Wait 30 minutes or more after hearing the last thunder before leaving shelter.
 - (2) Know and heed warning systems and community rules
Many communities or park systems have lightning detection and warning systems. Use this information and obey the rules established by the community or park system.
 - (3) Know and apply the rules or procedures established by the competition authority
 - (4) Minimize the risk of being struck
Referees must protect the safety of all participants by stopping game activities quickly, so that participants and spectators may retire to a safer place before the lightning threat becomes significant. Remember, if you can hear the thunder, you are within reach of lightning.
- b. Seeking proper shelter
 - (1) No place outside is safe near thunderstorms
 - (2) The best shelter is a large, fully enclosed, substantially constructed building. A vehicle with a solid metal roof and metal sides is a reasonable second choice.
- c. If there is no proper shelter, avoid the most dangerous locations:
 - (1) Higher elevations
 - (2) Wide open areas, including fields
 - (3) Tall isolated objects, such as trees, poles, or light posts.
 - (4) Unprotected open buildings
 - (5) Rain shelters
 - (6) Bus stops
 - (7) Metal fences and metal bleachers
- d. If you cannot avoid these locations, crouch down on the balls of your feet, with your head tucked into your chest and your hands over your ears.
- e. If someone is hit
All deaths from lightning result from cardiac arrest and stopped breathing. CPR and mouth-to-mouth resuscitation, respectively, are the recommended first aid. Referees should become involved in such assistance only if they have proper training.
- f. Remain calm. A calm official will often be able to prevent panic by young players.

**NO LIGHTNING SAFETY GUIDELINES WILL GIVE 100% GUARANTEED TOTAL SAFETY,
BUT THESE STEPS WILL HELP YOU AVOID THE VAST MAJORITY OF LIGHTNING CASUALTIES.**

2. Other types of severe weather

a. Severe storms or tornadoes

Obey local rules and heed warnings (meaning that a severe storm or tornado has been sighted). Clear the field and seek proper shelter immediately – see above. Remember, according to standard weather warning terminology a "warning" represents a more immediately likely occurrence than a "watch."

b. Hurricanes

There is usually plenty of advance notice, so games will probably have been cancelled. Look for warning signs.

c. Hail

Stop the game, clear the field, and seek proper shelter – see above.

NO SEVERE WEATHER SAFETY GUIDELINES WILL GIVE 100% GUARANTEED TOTAL SAFETY, BUT THESE STEPS WILL HELP YOU AVOID THE VAST MAJORITY OF CASUALTIES.

If there is a possibility of severe weather, the referee and assistant referees should discuss these guidelines in their pregame meeting and ensure that all officials have a clear understanding of their respective duties. Referees in particular should clearly identify what assistance they expect in detecting and bringing to their immediate attention any dangerous weather conditions which may not be directly visible to them. If such conditions develop only after a match has begun, the referee should take the first stoppage opportunity to quickly review these matters with the assistant referees. A brief word to the coaches regarding steps the referee will take to ensure player safety in threatening weather conditions would be useful.
